

LUMENCORE

Evidence-to-pilot infrastructure for reviewable AI decisions

Turn a candidate method into a reproducible decision packet before any field or performance claim.

Evidence fails before models do

In high-consequence operations, a buyer is not purchasing a score. The buyer is purchasing a defensible decision.

A strong result can still fail review when the evidence trail cannot answer four basic questions.

- 1

Dataset identity and allowed history
- 2

Baseline and metric lock
- 3

Negative results and uncertainty
- 4

Receipt, owner, and next action

WHAT BREAKS TRUST

- Data leakage

Future information contaminates the test.
- Moving goalposts

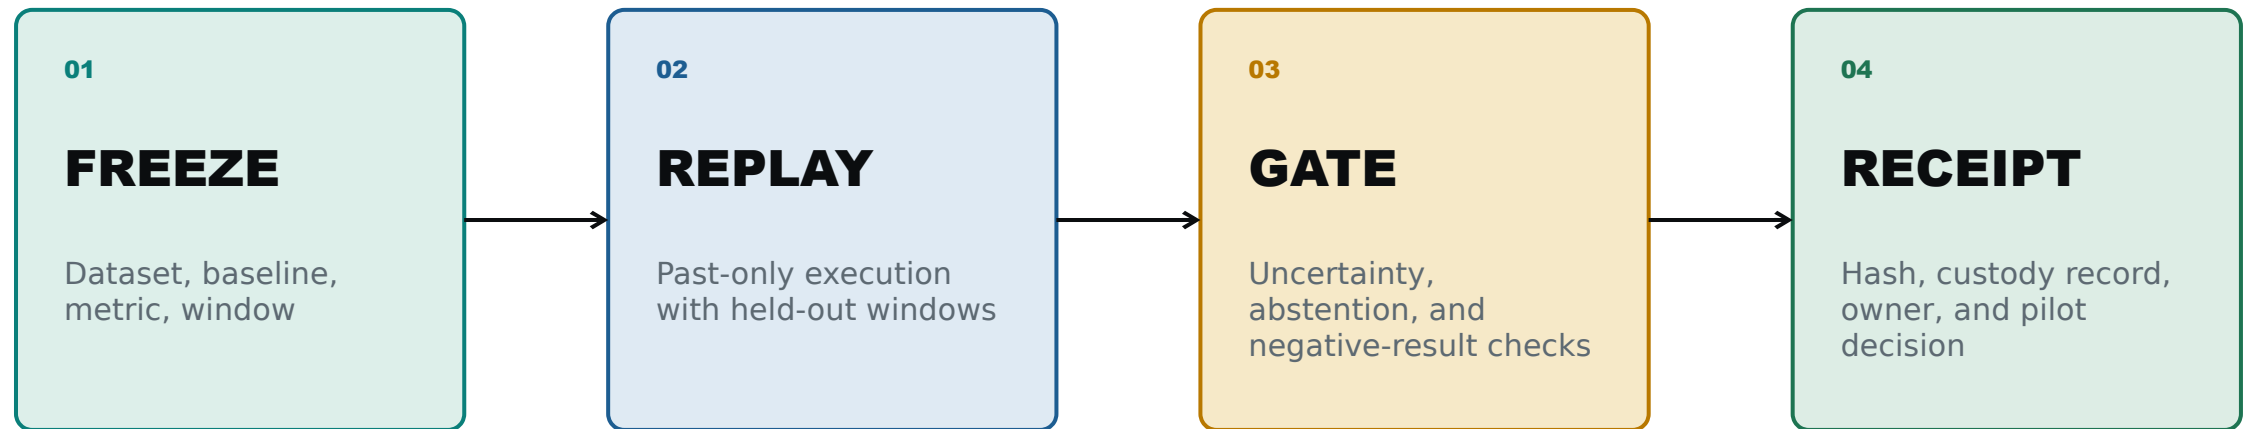

Baselines or metrics change after results appear.
- Hidden negatives

Only favorable runs survive into the deck.
- No custody trail

The artifact cannot be tied to code, data, or time.

One bounded workflow from claim to decision

LumenCore makes the evidence path explicit before any claim is promoted.

HUMAN APPROVAL BEFORE EXTERNAL RELEASE

Output: a reviewer-readable packet that can be reproduced, challenged, and used to decide whether a scoped pilot is warranted.

Start where one bad decision is expensive

Target hypothesis: organizations with costly reliability, planning, or forecasting errors and an incumbent baseline they already trust.

UTILITY / GRID	LAB / AGENCY	INDUSTRIAL RELIABILITY
BUYER Analytics or operations lead	BUYER Program or technical lead	BUYER Reliability or asset lead
TRIGGER A planning or forecasting model cannot clear internal review.	TRIGGER A research result needs a reproducible route to a field partner.	TRIGGER A failure-risk signal needs proof against the incumbent rule or model.
PILOT OUTCOME Decision receipt + replay package	PILOT OUTCOME Reviewer packet + validation plan	PILOT OUTCOME Scoped pilot + accepted evidence gate

Current evidence is measurable, including the negative result

CURRENT SOURCE-NATIVE LEDGER

Retrospective benchmark state

- 1 140 registered families; 35 implementations present
- 2 126 direct comparisons across 23 candidate-source cards
- 3 0 global Holm-positive comparisons
- 4 0 promoted champions

**Supports bounded software, custody, and protocol review.
No alpha, superiority, savings, or field claim.**

FROZEN PROSPECTIVE GATE

Future-only validation

- ! Eight source-native baselines
- ! Sixteen one-sided Holm contrasts
- ! 520 future daily sessions or 60 monthly releases
- ! Zero eligible future observations today

**Protocol LUMENCORE_TS_SOURCE_NATIVE_20260729_V1 is frozen
and waiting for new source rows.**

Commercial path begins with an accepted evidence contract

Three offers create a bounded entry, a controlled validation event, and a post-pilot expansion path.

1. EVIDENCE REVIEW

SCOPED

Price unquoted

Define the decision, lock the incumbent baseline, and produce a reviewer-ready evidence plan.

Buyer: Technical sponsor

2. CONTROLLED PILOT

GATED

Buyer-defined gate

Replay buyer-controlled data against a written acceptance gate and issue an auditable receipt.

Buyer: Design partner

3. PROGRAM LICENSE

POST-PILOT

After accepted receipt

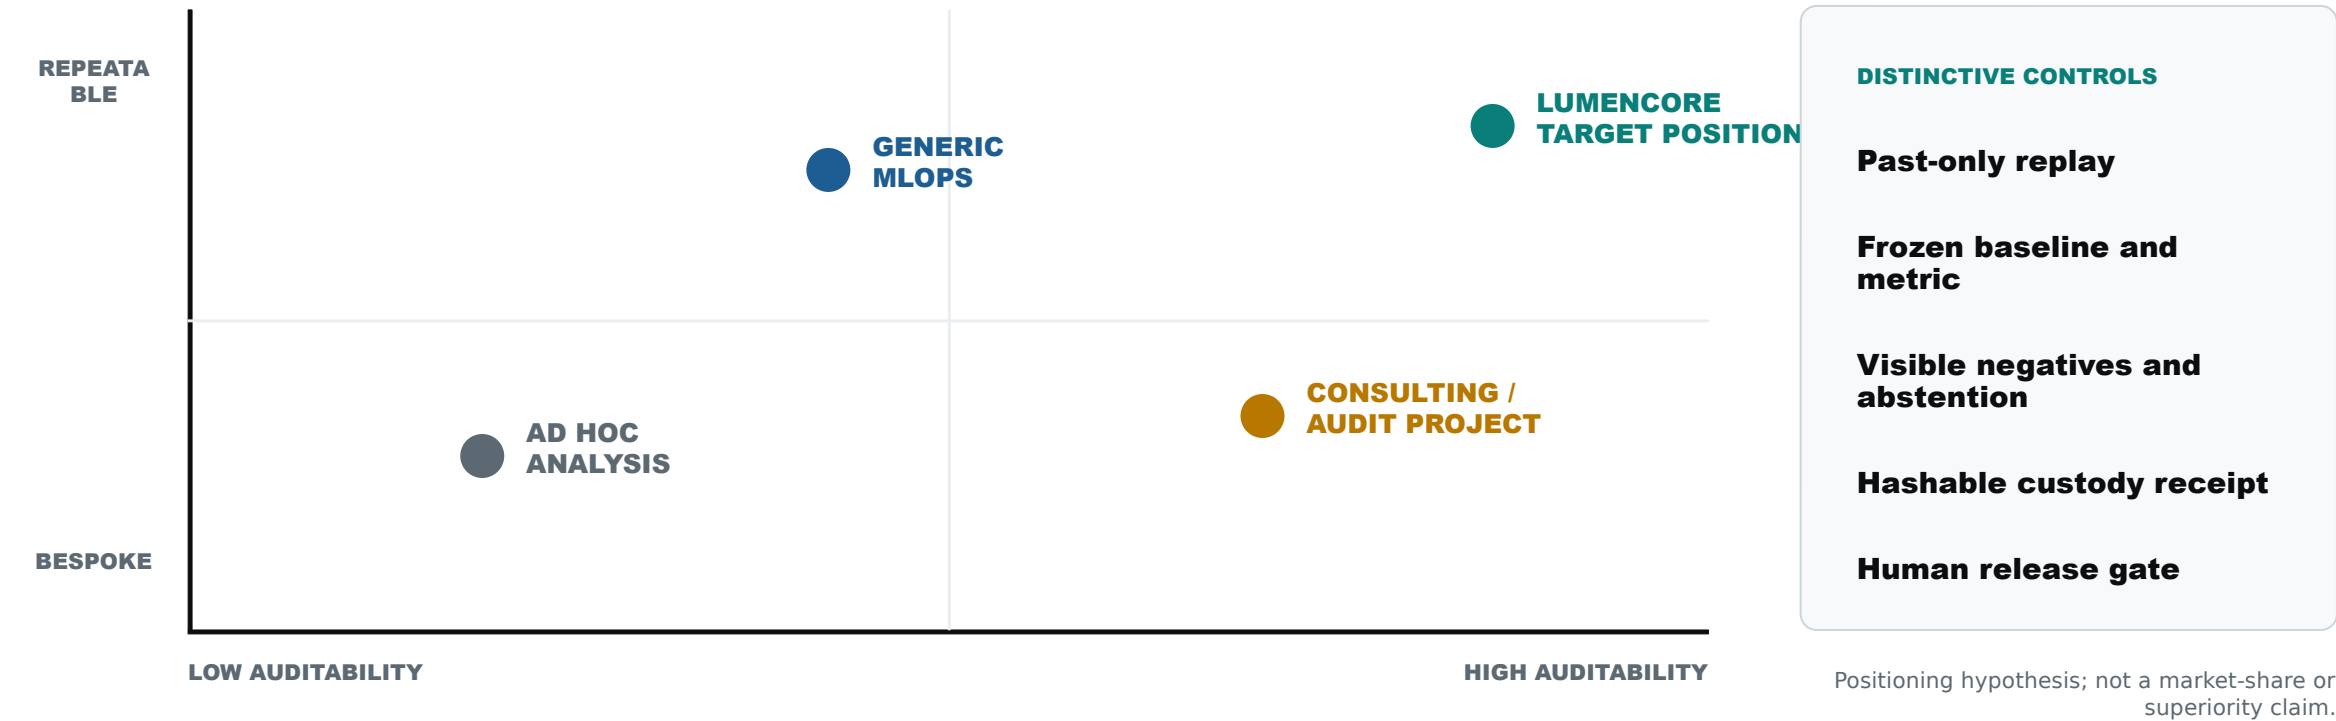

Automate repeatable reviews, evidence custody, governance, support, and approved workflows.

Buyer: Program owner

No pricing, paid customer, savings, or contract is claimed. Scope and price require founder approval.

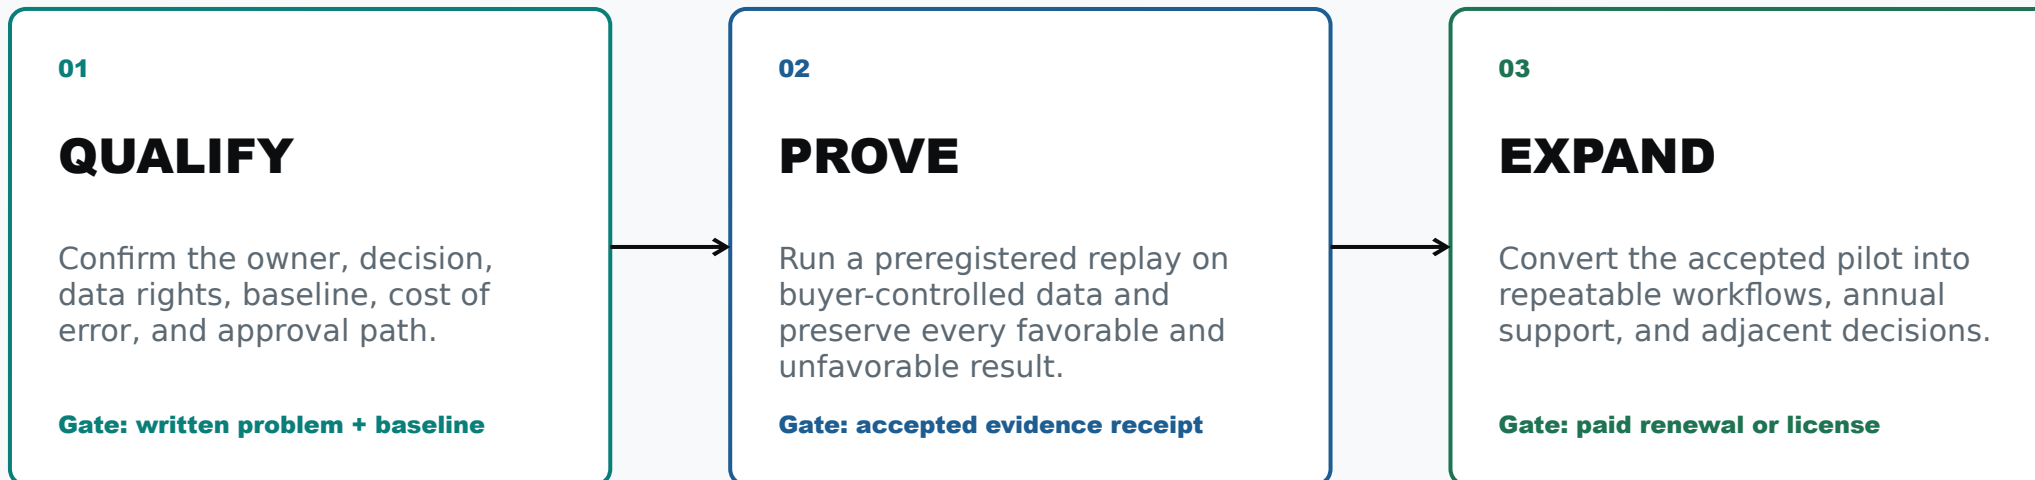

Positioned between model tooling and audit work

The wedge is not another model leaderboard. It is an evidence operating layer for decisions that must survive review.

Qualify one hard problem, prove it, then expand

The near-term objective is one serious design partner with controlled data and an accepted incumbent baseline.

**QUALIFICATION
GATE**

Named owner | accepted baseline | controlled dataset | written acceptance test

A paid pilot is defined by acceptance, not a sales claim

BUYER SUPPLIES

Controlled problem

- 1 Named decision owner and operating question
- 2 Lawfully controlled data with allowed-use terms
- 3 Accepted incumbent baseline and metric
- 4 Written cost-of-error and acceptance gate

Inputs define the decision contract before any pilot price, schedule, or outcome is represented.

LUMENCORE RETURNS

Auditable receipt

- 1 Frozen configuration and custody receipt
- 2 Past-only replay against the accepted baseline
- 3 Favorable, neutral, negative, and invalid outcomes
- 4 Human-owned next decision with no automatic release

No savings, ROI, or field-performance claim before a buyer-controlled result.

Near-term funding should buy independent evidence

MILESTONE-ELIGIBLE USES

What funding unlocks

- 1 Outcome-independent evaluator
- 2 Controlled-data integration
- 3 Security, insurance, and compliance work
- 4 Buyer design sessions with written gates

Milestone: an independently reproducible receipt and a written paid-expansion decision.

EXCLUDED WITHOUT APPROVAL

What this deck does not authorize

- 1 Valuation, dilution, or financing terms
- 2 Unrestricted scale or marketing spend
- 3 Live trading or autonomous external action
- 4 Patent, legal, or certification assertions

Amount, pricing, dilution, legal terms, and spend remain unapproved.

THE ASK

Help us earn the first independent proof receipt.

LumenCore is ready for one named buyer, one accepted baseline, one controlled dataset, and one result an independent party can reproduce.

Robert Ashworth | Founder, LumenCore

Current software and protocol evidence. External performance validation next.

WHAT WE NEED FROM A DESIGN PARTNER

- 01 **Buyer introduction in energy, infrastructure, or agency work**
- 02 **Outcome-independent evaluator with a frozen protocol**
- 03 **Qualified prime or contracting route when relevant**
- 04 **Scoped paid pilot after written acceptance gates**
